Henry Ford Health System & genusConnect Your Family + genusConnect™ = Better Caregiving

Daily observations drive better outcomes

“We were worried about dad’s anxiety and mood. Before genusConnect, he would get depressed but wouldn’t tell anyone. He would stop taking meds, he wouldn’t stay active. Now, with genusConnect, all the family members can record observations about how dad is doing, no matter where they live. This took the burden off me as the primary caregiver and also helped us spot problems before they got out of hand, allowing us to have better conversations with his doctor. genusConnect lets our whole family breathe a sigh of relief knowing we aren’t missing anything, and it gives me a pig piece of my life back. Now we are all on the same page and are able to better support each other.”

Patient Information			
Name: Judy Sample			
05/08/34	Height: 5'2"	Weight: 145lbs	BMI: 24.9
Current Information			
Allergies: Penicillin		Smoker: Yes <input type="checkbox"/> No <input checked="" type="checkbox"/>

The genusConnect Care Report is generated automatically. As the care network enters data, the Care Report is updated and is sharable with your medical professionals.

Things the medical professional will learn by reviewing the report:

- Physical and emotional observations made by caregivers
- Vital signs that are taken by family caregivers or in home professionals
- Surgical history
- Family history
- Insurance information and medical documents
- The families understanding of current medicines as compared to the doctor’s EMR (electronic medical records)
- Allergies
- Recent doctor and health care visits that may not show up in the doctors EMR

Leave copy with your care professional
