

THE SCIENCE IS CLEAR: VACCINES SAVE LIVES.

A pledge to the safety of patients is the beginning of every caregiver's journey. Within Henry Ford Health System, this focus on safety shapes every decision we make. Before the wide delivery of vaccines, we were among the first to bring these new drugs into a rigorous review to make sure they were safe. The science is clear. Vaccination provides the best protection against COVID-19, including unnecessary surges – like the new Delta variant that's currently sweeping across Michigan. Vaccines are effective at preventing the devastating effects of the illness and stopping the spread to our community. As a healthcare leader and trusted voice in our communities, we are also committed to helping fight the spread of misinformation surrounding vaccines, and doing our part to help end this pandemic.

The clinical leaders of Henry Ford Health System, represented by the 56 signatures below, share a unified and continued commitment to the science and delivery of lifesaving care.
